Geography Road Map

EYFS

During their time in EYFS, children begin to develop their geographical knowledge by exploring the natural environment around them, through first-hand experiences in their outdoor area and then in their local community of Branston. Maps, features and aerial views are used to investigate different places. Children will look at similarities and differences between their own natural surrounding environment and contrasting environments. Children observe and explore the natural changes of the world through the seasons.

KS1 Cycle A

Moving into KS1 children's geographical discovery continues. Children further their knowledge of the school and local area discovering the human and physical geographical features through first-hand experiences and observations. Using world maps, globes and atlases children extend their knowledge beyond Branston to the United Kingdom with a focus on London and then the wider world to continents and oceans.

Children apply their knowledge of geographical features, world maps, atlases and climates to compare and contrast Branston to a non-European country. During this cycle the children will study Mexico!

KS1 Cycle B

Children's knowledge of human and physical geographical features is deepened and enhanced through first-hand observations during our village walk. Map skills are developed and geographical knowledge is applied. With a secure knowledge of Branston and their local area, children compare Branston with a non-European country. During this cycle the children will study Africa. Recapping and further deepening their knowledge and understanding of the world's continents, oceans and climates, children look at how different climates effect different geographical features and the animals that inhabit it.
